

FIG. 1

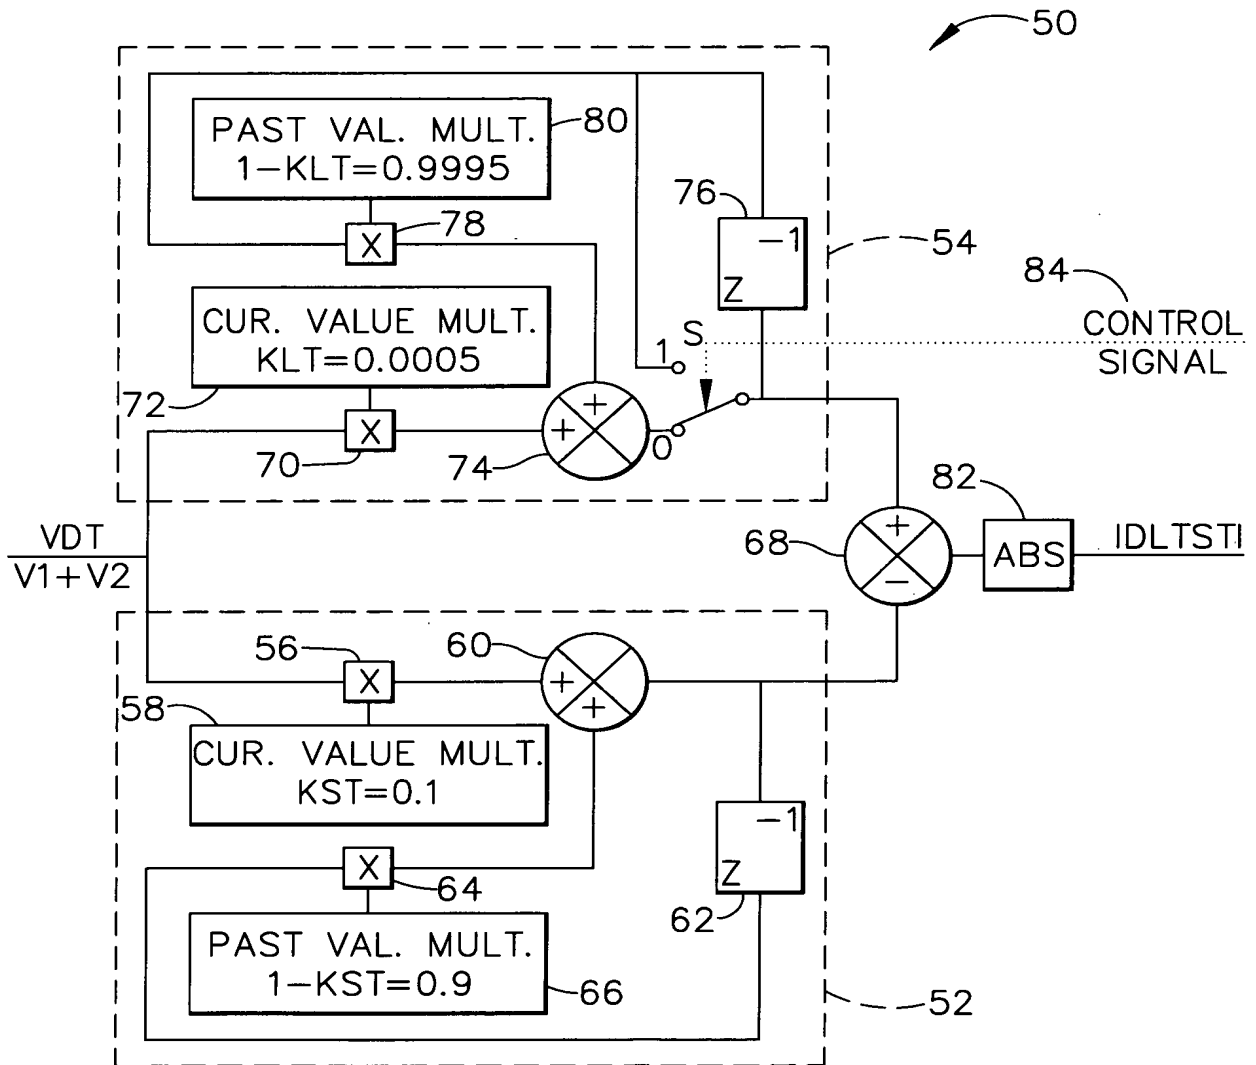

FIG. 2

The graph illustrates the relationship between the VDT Confidence Factor (VDTCF) and the IDLTSTI. The vertical axis represents VDTCF, ranging from 0.0 to 1.0. The horizontal axis represents IDLTSTI, with key points marked at 0, CFHi THRESH, and CFLo THRESH. The VDTCF is constant at 1.0 for IDLTSTI values from 0 up to CFHi THRESH. Beyond CFHi THRESH, the VDTCF decreases linearly, reaching 0.0 at CFLo THRESH. For IDLTSTI values greater than CFLo THRESH, the VDTCF remains at 0.0.
